InfinitiStone®
Your Natural Choice in Stone Cladding

Our Colour Selection

About This Product

Our manufactured Castle Stone recreates the majestic look of Castles of yesteryear. With its clean edge design it ensures a realistic appearance, such as in real stone buildings. Available in prefabricated corners, makes installation around pillars a breeze.

This product offers the most authentic representation of natural stone possible. Hand crafted from hundreds of different pieces of natural stone molds each product is made from the same basic ingredients that nature has used to form natural stone over the course of millions of years, its colour and texture created using a unique blend of cement, lightweight aggregates and iron oxide pigments.

Recreate the majestic look of Castles of yesteryear...

IS-M054

IS-M052

As much as 30% lighter in weight than natural quarried stone therefore can be veneered onto most wall surfaces

Dimensions, Sizing & Packaging

Flats:

50-300mmW x 50-300mmH varying (comes random in pre-packed boxes)

Quick Installation Tip

Before you start, select stones from several boxes to ensure proper blend of colour and size variation.

Layout on ground to your desired pattern then transfer to wall.

External corners should be installed first, starting from bottom and alternating long and short legs/returns.

Flats can be installed to fill in areas.

This range can be dry installed or grouted. For grouted finish, use a grout bag to ensure cleaner application and choose a grout colour as desired.

Being non-combustible makes it extremely durable, suitable for both exterior and interior projects – perfect for fireplace surrounds.

Cutting

Our manufactured veneers can be easily cut or trimmed using an electric tile cutter or hand held grinders with a diamond or masonry blade. Trimming can also be done by using a hatchet or wide-mouth nipper.

Joints

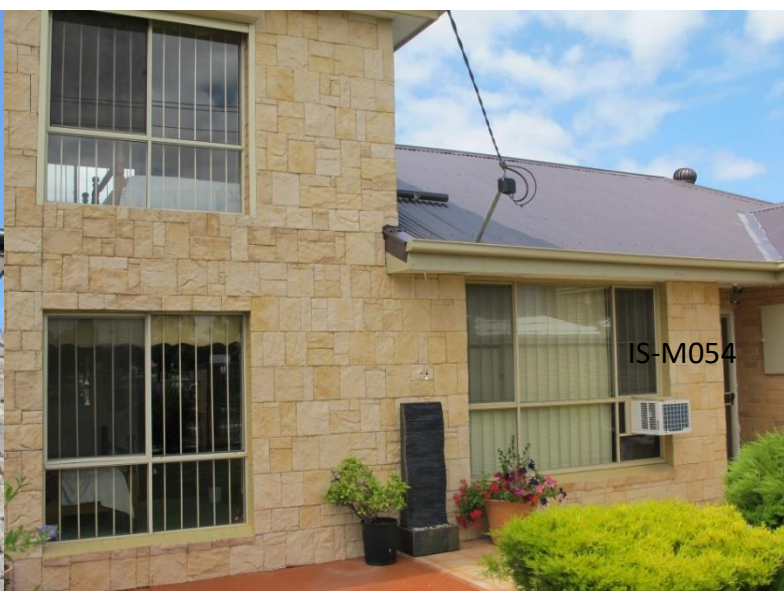

Our manufactured castlestone can be dry-stacked for a more modern feel or for a traditional look it can be grouted.

With grouted finish, you can select cement grey for a traditional look or coloured grout as desired to make it more personal.

Sealers

This product is porous in nature therefore we highly recommend applying a masonry sealer on completion.

You can choose a penetrating, breathable sealer to keep its original tone or a satin sealer for a sheen look.

SILICA DUST HAZARD - When natural stone or rock and other silica containing products are cut, crushed or sanded, dust is released. The very fine portion of the dust that is generated is known as respirable crystalline silica or silica dust. **Ensure to use necessary Personal Protective Equipment when cutting or shaping Natural or manufactured Stone Products.**
